Player with 'Score' = 224.59

- This skater is forever written in sports history as a gold robber
- I still can't believe she actually waved to the judges... and then hugged one of them afterwards...
- For those of you who may not understand how inflated her points were — this free program was scored just 0.11 points away from Yuna Kim's record breaking free program at Vancouver 2010. Honestly such a mockery
- Sotnikova had an incredible skate, one that should have earned her the bronze medal. This should have been the start of her career, an encouraging result that she could have used to motivate herself for the next Olympics. Instead, she won gold, fizzled out, and robbed a true legend the chance to go gold back to back. It's a shame, really.
- Sotnikova just said in an interview that her A samples tested positive for doping, but the IOC protected her and her B samples were "magically" not positive. Basically just admitted the Olympic committee and IOC helped cover up her positive doping. They literally did everything they could to drag her onto that first place podium.

- 6 years later and I'm still bitter about her not winning gold....
- A female American commentator called this "a performance for the ages." Looking back, I'm thankful she didn't call this a gold medal winning routine. Gold medal-winning performances can be surpassed. But being called "performance for the ages" means being put on a level much higher than a gold medal.
- Perhaps right after the game, Yuna said "The unfair score was predictable enough for the atmosphere and other things.
- At the moment I thought she was robbed, with Sotnikova becoming the gold medalist. But now, everyone knows Yuna is a true winner. Her performances in Vancouver and Sochi was just glorious and I don't even remember what songs Sotnikova used for the program.

- did you guys know she never even complained once about this event (well, any other event in her life)? she said "i'm not the judge, so i cannot say anything about the result" she is so humble and she even gave sotnikova a hug after the event, even though sotnikova only held out her hands for a handshake.

- Mao Asada, Carolina Kostner and Yuna Kim, the holy trinity.
- Even if this Olympic was a scam for figure skating, Yuna Kim and Carolina Kostner are from another planet
- Obviously her skating skills were magnificent, but her jumping technique was very solid as well. She may not have always been known for her technical feats in figure skating, but her correct jumping technique is what allowed her to be competitive into her 30's.
- the real fight for gold shouldve been Yuna vs Carolina. Both were flawless and magnificient. If only Mao had skated clean during the short program, it would have been the most legendary competition in ladies figure skating.
- Carolina was always elegant, brilliant and graceful. When she found the strength and the courage to compete at olys, she was absolutely amazing, she was top, the biggest diva on the ice. She's a heroine in too many ways. Glad to see this program again.

Player with 'Score' = 205.53

- Gracie Gold has always competed in an individual sport, but what she did Sunday was the equivalent of hitting a game-winning double.
- A career-best free skate score and second place in that segment by the 18-year-old iced a bronze medal in the new team figure skating event and gave Gold the confidence she can perform well on the world's biggest stage when she comes back to compete solo in 10 days' time.
- Gold said she was "thrilled, and definitely relieved" to have executed under pressure. She and all the skaters in Sochi who took on an extra competitive program or two are in new territory, but she said she feels her evening ultimately will be far more adrenalizing than fatiguing.

Player with 'Score' = 200.57

- Shes practiced this piece so many times it looks almost as if shes free styling.
- Now I see why Yuri Plisetky from Yuri on Ice was based off of her. Absolutely Beautiful
- She looks like she's just up here doing her regular routines instead of THE

Olympic. She made it look so easy. The spin, the landing, the balance, everything's just absolutely flawless.

Player with 'Score' = 198.22

- Even after 10 years··· this free skate is one of the most memorable in figure skating history
- Although I practice a lot, things don't always turn out as expected. In such moments, I always watch this performance and remind myself that I can try again.
- That step sequence at the end is everything. Beautiful performance

Player with 'Score' = 2

- This large-sized apple offers a sweeter profile, which could appeal to those favoring less tart fruit. However, its low nutrient content, dry texture, and musty notes undermine its potential. Despite its significant market promise, quality improvements are necessary to fulfill its deserved wider recognition and ensure consumer satisfaction.
- This apple variety is an exceptional blend of nutrition and flavor, boasting a rich profile of dietary fiber and vitamin C. Despite its diminutive size, it packs a powerful, sweet aroma complemented by a refreshing juiciness. Not overly tart, it presents a palate-pleasing sweetness ideal for the health-conscious consumer. Its untapped market potential demands increased visibility for apple aficionados everywhere.
- The apple, despite its modest nutrient profile, impresses with a generous size and a potent aroma that promises flavor. Its delicate balance, favoring sweetness over tartness, couples with a juicy freshness that caters to a broad audience. Its considerable potential in the market should not be overlooked, warranting greater consumer and supplier attention.

Group with 'Score' = 3

- Despite its underwhelming nutrient profile, this large apple impresses with its delightful sweetness, which overshadows its mild tartness. However, the texture disappoints, being dry and missing juiciness. Nevertheless, given its appealing size and flavor balance, it holds strong market promise and merits increased consumer awareness.
- Despite its low nutrient content, this apple impresses with its large size and strong aroma, offering a sweet over sour flavor profile. Its abundant, refreshing moisture enhances the eating experience, making it a variety with significant market potential that rightly deserves wider recognition.

- This apple variety impresses with a wealth of essential nutrients, bringing dietary fiber and vitamin C to the fore. Its large size is satisfying, while the sweetness overtakes any sourness, making it a delightful treat. What stands out is the apple's abundant moisture content, providing a refreshing burst with each bite, perfect for health-conscious consumers who appreciate juicy freshness.

Group with 'Score' = 4

- With its high levels of dietary fiber and vitamin C, coupled with a large size and robust aroma, this sweet apple exceeds expectations. Its ample moisture refreshes, and given its strong market potential, it's poised for broader acclaim. Truly, this is a standout variety that both suppliers and consumers should take note of.
- Despite its relatively low content of essential nutrients, this large apple impresses with its strong aroma and delightfully sweet taste, outbalancing its slight sourness. The apple's abundant and refreshing moisture ensures a pleasurable eating experience, suggesting immense market potential. Its unique qualities undeniably merit broader acknowledgment in the consumer space.
- This apple variety impresses with its substantial size and intoxicating aroma, promising a delightful sensory experience. Its balance, leaning towards sweetness with a burst of refreshing moisture, is complemented by a high content of essential nutrients, like dietary fiber and vitamin C. Given its attributes, this apple not only offers health benefits but holds strong market potential that merits greater recognition.

Tasks: Factor Abstraction.

What are the high-level factors behind the text that contribute to the allocation of groups?

About Output

Please think step to step to consider potential factors.

At end of the answer, you are required to report the factors that you decided to use **in following template:**

```
**Factor Name**
- 1: [Positive Criterion]

- 0: [Otherwise; or not mentioned].
- -1: [Negative Criterion]
```

Data
The reviewer comments and score for a player that are randomly picked:

- Nicole Rajičová delivered a graceful and determined performance at the 2014 Sochi Olympics, finishing in twenty-fourth place with a total score of 125.67. In the short program, she earned 48.59 points, with a total element score of 26.35 and a program component score of 22.24, receiving no deductions. Her technical highlights included a triple toe-double toe combination (6.40 points), a triple loop (5.10 points), and a double Axel (3.92 points), alongside well-executed spins and step sequences such as the Layback Spin Level 4 (3.20 points) and Step Sequence Level 3 (3.30 points). In the free skating program, she earned 77.08 points, with a total element score of 37.83 and a program component score of 40.25, receiving a one-point deduction for a fall. Her technical elements featured a triple toe-double toe combination (6.10 points), a triple loop (4.50 points), and a double Axel (3.30 points), while she demonstrated fluid choreography and expressive movements with highlights such as the Choreographic Sequence (2.20 points) and Step Sequence Level 3 (3.40 points). With her elegant style, consistent technique, and artistic interpretation, Rajičová showcased her potential on the Olympic stage, representing Slovakia with poise and determination.
- ISU short program scoring manipulation is very clear here. Yuna Kim had a supreme quality 3Lz3T and a supreme step sequence that deserves level 4 but had a TES lower than Adelina Sotnikova's wobbly 3T3T and sloppy level 3 step sequence. THIS IS A CRIME. I very much disapprove that Yuna was given less total GOE compared to Adelina in the short program. How their PCS was that close was also puzzling.
- Olympic channel is truly shameless. Using Yuna as thumbnail pics to draw clicks but they could not and would not even try to address the scoring crime in Sochi. I could not hold myself not to click this video to watch Yuna and Kostner's superb performance and immediately skip over Adelina.
- there are many outstanding players in terms of technical skill. however Yuna Kim's performance is uncomparable and never seen any other player who express so gracefully like Yuna Kim. She is the queen and our hero forever.

Tasks
For the given sample, what is the most appreciate factor value based on the criterion?

Technical Difficulty & Execution

- 1: High base value and positive GOE across elements.
- 0: Average difficulty or neutral GOE.
- -1: Major execution issues or weak base value.

Program Components (PCS) – Artistry & Interpretation
- 1: Exceptional artistry, performance, and interpretation.
- 0: Average or competent artistic performance.
- -1: Weak interpretation or lack of musical connection.

Consistency & Cleanliness
- 1: No falls, strong landings, seamless execution.
- 0: Minor mistakes but overall intact program.
- -1: Falls, stumbles, or disrupted rhythm.

Perceived Scoring Fairness
- 1: Widely accepted as fair.
- 0: Some debate but no major controversy.
- -1: Public or expert backlash, claims of bias.

Historical & Cultural Impact
- 1: Recognized as a legendary or influential performance.
- 0: Respected but not groundbreaking.
- -1: Seen as undeserving of historical recognition.

Your final output should follow this template:
"The value is: ___."
